

Cell phone Accessories

(Radiation Reducing Cell phone Covers/Skin)

PRODUCT HIGHLIGHTS :

- Cell phone Cover / Skin reduces Cell phone radiation (SAR report) by at least 50% at 900MHz.
- Anti EMR Cell phone Cover/ Skin protects the user if the cell phone is placed in shirt or trouser pocket.
- SIRIM Report proves material can absorb EMR.

TEST REPORTS

- SIRIM Report No : 2012EMC240
- S.A.R. Test Report (MORLAB): SH12070014S01

SPECIAL REMARKS :

- We can custom make your Cover or Skin design. (MOQ > 5K).

COVERS

INTRODUCTION

All cell phones emit Radio Frequency (RF) microwave energy which can be a health hazard. The S.A.R. (specific absorption rate) is an indication of the amount of RF radiation that is absorbed into a head whilst using a cell phone. The higher the SAR rating, the more radiation that is absorbed into the head. For a phone to be sold in Malaysia, the maximum emitted RF energy must be below the ICNIRP specification of 2 watts per kilogram of human tissue.

The UNKNOWN RISK

Cell phones & **CANCER...**
Is there a **RISK . . .**

PI : FACT 1 : *The WHO has issued **Precautionary Warning** since it has NOT been proven that Cell phone radiation is SAFE.*

FACT 2 : *The Experts can't agree with each other . . . So, should we risk the health of our loved ones?*

Radiation deposition for models of an adult (left), 10-year-old child (middle) and 5-year-old child (right) show substantially greater penetration into the child's head. - Gandhi,

P2 : Radiation penetration greater for 5 year old.

P3 : Ads Being Placed in Public Men's Bathrooms in London.

HAZARDS OF CELL PHONE RADIATION

Cell phones meet the S.A.R. specification only if the phone is kept at least **15 mm away** of our head. This **WARNING** is found in all cell phone manuals! However, most of us skip this part and unknowingly place the cell phone against our head against manufacturers' advice. To reduce to radiation, Manufacturer's and experts advise us to use a hands free kit to reduce radiation. But, we only use the hands free kits whilst driving due to the inconvenience. Generally, most men and children place their cell phones in their shirt pocket or trouser pocket thus exposing their developing bodies to radiation. In May 2011, the W.H.O. classified RF EMR as "possibly carcinogenic" under Group 2B and warned that children would be particularly vulnerable to RF radiation.

Some experts believe that it can cause childhood brain tumours and other kinds of cancer. Of the 28 million hand-phone users in Malaysia, close to 2% (640,000) are kids below 15 years and about 10% (2.8 million) are people between 15 and 19 years of age. Thus, the advisory from the W.H.O. should be taken heed and precautionary measures should be taken to reduce our overall exposure particularly with regards to children.

Note : Authorities in several countries have advised parents to reduce their children's exposure to cell phone radiation. In France, it is illegal to advertise Cell phones to children below the age of 16 years and in Israel, it may be mandatory for all cell phones to carry a "WARNING" label.

ONE SIMPLE SOLUTION - ANTI-EMR CELL PHONE COVER

The Anti-EMR cell phone Covers ABSORB cell phone radiation by at least **50%**, thereby reducing our exposure to cell phone radiation. The cell phone Cover continues to absorb radiation even when the cell phone is kept in the shirt or trouser pocket, thus protecting the user.

THE TECHNOLOGY

Made from Radar Absorbing Material (RAM) just like the Special EMR reducing Coating and Card, the Anti-EMR Cell phone Cover also absorbs RF Microwave radiation emitted from cell phones.
